

Recycling Education

A Greener Tomorrow

Mazza Recycling provides comprehensive recycling education and outreach to our local communities, with the goal of teaching current and future generations the importance of recycling. We do this by providing programming designed to encourage sustainability in the form of tours, community tabling & events, and in-school presentations. The program is custom tailored to best serve the needs of our local residents, customers, schools, educators, and organizations.

PRESENTATIONS

Presentations are facilitated by an educated member of the Mazza team, and custom made so that students and adults of all ages can learn about complex recycling systems in an engaging, easy-to-understand, and fun hour-long experience. Our facilitators would provide participants with take away materials that allow them to continue the recycling conversation at home, and with their peers.

TABLING & EVENTS

Mazza Recycling is an active participant in community events — including festivals, parades, fairs, and Earth Month celebrations. At these events, our teams engage the public, often answering questions about proper disposal of specific materials, like recyclables or bulky items. Our teams come prepared with interactive sorting games and eco-friendly giveaways that promote recycling and waste reduction.

TOURS

Mazza Recycling welcomes groups to tour many of our facilities, including our recycling and organics processing operation, transfer station, and single stream recycling facility to provide an inside look at recovery and sorting operations. Our team regularly hosts tours for school groups and commercial businesses, community groups, product designers, and industry professionals interested in learning how their actions impact the recycling process.
